New in this version

Version 2.0.2

August 2017.

- › **Forestry tyres:** Links to instructional tyre mounting videos added.
- › **Nokian Excavator:** List of complete wheels / approved rims added.

Version 2.0.1

August 2017.

- › **Nokian Loader Grip 2:** Values updates for T445463.
- › **Nokian Armor Gard:** T-Code Flap and Flap data corrected for T445450 and T445459.
- › **Mining tyres:** T-Code Flap and Flap data corrected for all products with flaps.

Version 2.0

July 2017.

- › **Container and material handling tyres:** New products **Nokian HTS G2 E-4** and **Nokian HTS G2 L-4S** added.
- › **Nokian Hakkapeliitta TRI:** new products T445634 and T445636 added.
- › **Nokian Forest King TRS 2:** a new permitted rim added for T445639.
- › **Nokian Forest Rider:** load capacity values updated for T445472 600/50R24.5.
- › **Nokian Forest Rider:** rims and permitted rims corrected, and tube product code corrected for T445466.
- › **Nokian Forest King T:** permitted rims added.
- › **Nokian TR Forest:** rims corrected for T482170, T482192, T482198, T482220, and T483150.
- › Replacement guide: rim size corrected for Nokian Forest King F 600/55-26.5.
- › Tyre choice and inflation pressures by application: John Deere forwarders: machine codes corrected. Komatsu harvesters: values corrected for 901 / 6 wheels. New machine 901XC added. Machine codes corrected. Komatsu forwarders: values corrected for 835 / 8 wheels. Rottne forwarders: new machines F10d and F11d added.
- › **Industrial rims:** Nokian O-ring product codes corrected.
- › Transparent Cap for use with R2" valve protector: product code corrected.
- › Contents link added to the breadcrumbs navigation.

Version history

Version 1.2.0

April 2017.

- › **Nokian Forest King TRS 2:** new products T445639 and T445640 added. Liquid and salt ballasting and tubes and valves added to product T445618.
- › **Nokian Forest King F2:** liquid and salt ballasting values added to product T445619.
- › **Nokian TRI 2:** a missing size added to the size equivalency table.
- › **Nokian Mine King E-4:** missing main table values and liquid and salt ballasting values added to product T445617.

Version 1.1.1

February 2017.

- › **Nokian Forest Rider:** load capacity values corrected for T445460.
- › **Nokian CT:** total tread depth values corrected for T445626, T445629, and added for T445556.

Version 1.1

January 2017.

- › **Nokian CT:** missing main table values, load capacity values, liquid and salt ballasting and tubes and valves added to products T445626, T445627, T445628, T445629.

Version 1.0

December 2016.

- › New Technical manual released including information on truck and bus tyres.

Forestry tyres

The unique qualities of Nokian forestry tyres arise from decades of experience on the forestry machinery and the extreme working conditions. This continuous forefront product development is based on close dialogue with customers and the respect for the nature. Understanding the application leads to high quality products giving customers added value in safety, reliability and cost per hour.

Contents

CTL machines – Track pattern

- 6** Nokian Forest King F2
- 13** Nokian Forest King F
- 19** Nokian Forest King ELS L-2
- 22** Nokian Nordman Forest F

- 27** Replacement guide
- 29** Track recommendation short list

CTL machines – Traction pattern

- 31** Nokian Forest King TRS 2
- 38** Nokian Forest Rider
- 44** Nokian Forest King TRS L-2
- 50** Nokian Nordman Forest TRS L-2

- 57** Replacement guide
- 59** Track recommendation short list
- 61** Tyre choice and inflation pressures by application

Forest tractors

- 81** Nokian Forest Rider
- 86** Nokian Forest King T
- 90** Nokian TR Forest
- 98** Nokian TR Multiplus

- 103** Ground contact pressure comparison

Skidders

- 106** Nokian Logger King LS-2
- 111** Nokian Forest King TRS LS-2

Watch our instructional videos:

- » CTL tyre mounting
- » Skidder tyre mounting

NOTICE!

Manual may contain technical information also on omitted products.

Nokian Forest King F2

Improved tyre performance with tracks

- › Wider and straighter contact point to give better traction to the tracks
- › Perfect support for tracks in every point of the tread and shoulders
- › Durable tread, sidewalls and carcass for excellent operating hours

Diagonal Forestry Tyre

- › The tyre carcass is protected by steel fortification (SF).
- › Multiple ply cords are laid at alternate angles substantially less than 90° to the centerline of the tread.

Nokian Forest King F2 tread depth measuring point beside tie-bar

Sizes

- › Nokian Forest King F2 600/50-22.5 20PR – T445619
- › Nokian Forest King F2 710/40-22.5 20PR – T445608
- › Nokian Forest King F2 710/40-24.5 20PR – T445572
- › Nokian Forest King F2 600/55-26.5 20PR – T445573
- › Nokian Forest King F2 710/45-26.5 20PR – T445571
- › Nokian Forest King F2 710/45-26.5 24PR – T445589
- › Nokian Forest King F2 800/40-26.5 20PR – T445603
- › Nokian Forest King F2 750/55-26.5 24PR – T445574
- › Nokian Forest King F2 710/55-28.5 24PR – T445570
- › Nokian Forest King F2 780/50-28.5 24PR – T445537

Nokian Forest King F2 600/50-22.5 20PR – T445619

Nokian Forest King F

Sturdy and stable tyre for demanding forestry use

- › Tyre profile designed to give optimised ground contact patch and straight obstacle yielding sidewalls
- › Durable tread and sidewalls for excellent operating hours
- › Reliable fit and functionality for track and chain use
- › Steel protection against punctures

Diagonal Forestry Tyre

- › The tyre carcass is protected by steel fortification (SF).
- › Multiple ply cords are laid at alternate angles substantially less than 90° to the centerline of the tread.

Nokian Forest King F tread depth measuring point beside tie-bar

Nokian Forest King ELS L-2

Efficient operating hours

- › Sturdy and stable low profile tyre
- › Durable tread and sidewalls giving excellent operating hours
- › Steel fortification against punctures

Diagonal Forestry Tyre

- › The tyre carcass is protected by steel fortification (SF).
- › Multiple ply cords are laid at alternate angles substantially less than 90° to the centerline of the tread.

Nokian ELS L-2 tread depth measuring point

Nokian Nordman Forest F

Nokian Nordman Forest F

- › Cost efficient solution for CTL machines without compromising in reliability and functionality
- › Well known and trusted Forest King F as the basis of design
- › Excellent solution as a replacement tyre for CTL machines and also for overhauled machines as basic maintenance involving tyres

Diagonal Forestry Tyre

- › The tyre carcass is protected by steel fortification (SF).
- › Multiple ply cords are laid at alternate angles substantially less than 90° to the centerline of the tread.

Nokian Forest King TRS 2

Ultimate traction

- › New lug design and wide tread design gives superior traction
- › Shoulder design improves lateral grip and puncture resistance
- › Tyre shape with new shoulder desing gives very good track use capabilities
- › Sturdy diagonal carcass for excellent operating hours

Diagonal Forestry Tyre

- › The tyre carcass is protected by steel fortification (SF).
- › Multiple ply cords are laid at alternate angles substantially less than 90° to the centerline of the tread.

Nokian Forest King TRS 2 tread depth measuring point

Nokian Forest Rider

TUBELESS

Driving comfort and absolute traction

The first and only functional radial forestry tyre in the market for professional use. Nokian Forest Rider wins users over with its unique properties.

- › Large contact patch providing excellent traction
- › Low ground pressure reducing stress to terrain
- › Radial construction giving driving comfort and minimising tyre vibrations considerably
- › Puncture protection from steel belt and patented sidewall protectors
- › Sturdy sidewall construction giving superb operational stability
- › Low rolling resistance reducing fuel consumption
- › Works better with tracks compared with conventional diagonal forestry tyres

Radial Forestry Tyre

The tyre carcass is stabilized by an inextensible circumferential belt (SB = steel belt).

- › Sidewall puncture protector.
- › The ply cords are laid substantially at 90° to the centerline of the tread.

Nokian Forest Rider tread depth measuring point on top of tie-bar

Sizes

Nokian Forest King TRS L-2

Excellent traction

- › Wide and high pattern lugs for good mobility and operating comfort
- › Optimised lug angle and sharp tyre shoulders providing excellent lateral grip
- › Mainly for operating without tracks
- › Steel protection against punctures

Diagonal Forestry Tyre

- › The tyre carcass is protected by steel fortification (SF).
- › Multiple ply cords are laid at alternate angles substantially less than 90° to the centerline of the tread.

Nokian Forest King TRS tread depth measuring point

Nokian Nordman Forest TRS L-2

Nokian Nordman Forest TRS L-2

- › Good lateral grip due to tyre construction and shoulder area shape
- › Good terrain mobility due to deep tread pattern and wide ribs
- › Reliable and cost efficient solution also for older forestry machines in need of basic maintenance involving new tyres

Diagonal Forestry Tyre

- › The tyre carcass is protected by steel fortification (SF).
- › Multiple ply cords are laid at alternate angles substantially less than 90° to the centerline of the tread.

Nokian Forest Rider

TUBELESS

Radial efficiency for versatile forestry contracting and transport ride

- › Sturdy and stable radial tyre for heavy forestry use tractors and other forestry machines
- › Smoother driving response and comfort compared with traditional forestry tyres
- › High load capacity
- › Low rolling resistance reducing fuel consumption
- › Excellent traction from radial construction and optimised tread design
- › Sharp shoulder area giving good lateral grip
- › Puncture protection from steel belts and sidewall protectors

Nokian Forest Rider tread depth measuring point on top of tie-bar

Sizes

Nokian TR Forest

Reliable tyre for tractors in forestry use

- › Strong diagonal construction
- › Tread pattern giving excellent traction
- › Good self cleaning properties
- › Tread compound developed especially for forestry use

Nokian TR Forest tread depth measuring point on top of tie-bar

Sizes

- › Nokian TR Forest 11.2-24 10PR – T482170

Nokian TR Multiplus

TUBELESS

Radial tyre for multi purpose use

- › Tyre for light forestry, agriculture and earthmoving applications
- › Good transport properties
- › Excellent grip
- › Excellent self cleaning properties

Nokian TR Multiplus tread depth measuring point

Sizes

Ground contact pressure comparison

Ground pressure comparison between different tyre sizes

Both the tyre diameter and width have an important role in determining the size of tyre contact area. In practice the tyre diameter increase has greater effect on machine mobility than the width increase. Due to the variation in operating ground the absolute ground pressure values can be difficult to assess. However the information in this table is useful when comparing the relative performance of different tyres.

Contact area and ground pressure at different tyre loads. Soft soil.

Nokian Logger King LS-2

Skidder tyre for the hardest conditions and the biggest machinery

Nokian Logger King has more than enough rubber and steel to take the beating and stabbing of the heaviest skidder use – day after day. But it also features some clever design and new rubber compound to maximize the grip, durability and self cleaning properties. Rugged but clever, Nokian Logger King offers more grip and longer service life in the extreme conditions.

- › Steel breakers for extreme puncture resistance (including the shoulder area)
- › Ultra-durable, high-strength multilayer textile carcass
- › Special rubber compound designed for forestry use
- › Unique single wire bead construction for easier on-site assembly and even rim flange loading
- › Special bead rubber compound minimizes the possibility of rim slip

- › Extreme-version designed for hardest conditions and for the biggest machines
- › Extra layers of steel fortification under the tread against punctures
- › Even more durable carcass with more layers to give maximum service life and minimum downtime
- › Special design rubber compound to hardest and extreme cold conditions

Nokian Forest King TRS LS-2

Nokian Forest King TRS LS-2

A forestry machine traction tyre with a strong traction bar and excellent grip. Well-cleaning, open-centre tread design. Durable special rubber compound and efficient steel fortification.

- › Tyres for log skidders, wide tread with high traction lugs
- › Special cut and crack resistant compound
- › Steel fortification against punctures

Diagonal Forestry Tyre

- › The tyre carcass is protected by steel fortification (SF).
- › Multiple ply cords are laid at alternate angles substantially less than 90° to the centerline of the tread.

Nokian Forest King TRS tread depth measuring point on top of tie-bar

Agricultural tyres

Tractors and other agricultural machines are getting bigger and also faster in transition driving and other such situations. Consequently, low soil compaction and fuel costs are particular focus areas. In response to the quickly changing demands of farming, we are developing new radial products alongside the traditional cross-ply tyres. Our extensive range of special agricultural tyres provides farmers and the environment with controlled power and gentle efficiency throughout the year, every year.

Nokian TRI 2

Reliable performance all year round

A reliable partner for modern-day farmers and equipment contractors. Excellent grip, high load-bearing capacity and a pleasant driving response. The low rolling resistance efficiently reduces fuel consumption.

- › Versatile and environmentally friendly special tyre designed for the needs of modern farming and machine contracting
- › Excellent grip, high load-bearing capacity and a pleasant driving response
- › Sturdy and fast also on the road (max. 65 km/h / 40 mph)
- › Good self-cleaning

Nokian Hakkapeliitta TRI

Precise control and great efficiency

The first winter tyre for tractors, Nokian Hakkapeliitta TRI, gives you all the grip you can get. Featuring all new rubber compound, tread pattern and contact profile, it's designed for single purpose: to give you all the grip, control and efficiency you need for demanding winter contracting.

- › Precise control and great efficiency
- › Driving comfort on class on its own
- › Superior traction and lateral grip

Sizes

More information on the **Nokian Hakkapeliitta TRI** sizes is available in the **Earthmoving and road maintenance equipment tyres** section on **page 257**.

Nokian TRI 2 Extreme Steel

EXTREME STEEL BELTED

- › Tread rubber designed for extreme conditions, requiring constant use of chains, chain recommendation: Easy-chain from different chain manufacturers, all chain material under 9 mm by diameter
- › Excellent wear resistance against tear and wear in rough on and off the road conditions
- › Steel belts give good puncture resistance to tread area
- › When used without chains the present TRI 2 has better winter grip

Sizes

Contact areas on a hard driving surface

TRI patterns have a significantly larger net contact area compared with traditional tractor drive tyres. This results in significant improvement in friction rate, grip, and wear rate.

Ground contact area ratios

Normal tractor drive tyre

20–25 % net contact area

Normal section TRI

42 % net contact area

80 series TRI 2

39 % net contact area

80 series Hakkapeliitta TRI

45 % net contact area

Contact areas on a hard driving surface

Contact area on hard surface

The deflection takes place only on the tyre and not at all on the ground. The values in the table are valid at the nominal load and air pressure conditions.

Contact area on soft soil

The deflection takes place mainly on the ground: the tyre sinks 15% of its diameter into ground, but the deflection will recover to half of the original value. It is impossible to compare actual measurements in different places, but comparison between different tyre sizes is possible with the help of the table below. Compared to the corresponding standard dimension TRI 2 tyre commonly gives an appr. 5–10% larger contact area. 65 series tyres will give an approximately 20–30% larger area compared to corresponding sizes with a normal section.

Studs and chains

Studs

Nokian TRI 2 and Nokian TRI patterns offer an excellent winter grip. To gain even more traction and grip in extreme wet icy conditions the tyres can be studded. The following schematic pictures show the studding sequence.

Stud recommendation

- › Recommended types are truck, tractor or construction machine studs
- › Maximum stud length is 25 mm / 1 in
- › Minimum stud flange is 9 mm / 11/32 in

Stud dimensioning examples

Stud marking	Stud length		Flange diameter		Stud hole diameter		Stud protrusion	
	mm	in	mm	in	mm	in	mm	in
9 - 15	15	19/32	9	11/32	4	5/32	2	3/32

Chains

It is recommended to use chains only for short periods at a time. Chains shorten the tyre lifetime. Nokian Heavy Tyres limited warranty doesn't cover any damages made by accessories including the use of chains.

The use of chains comes into question when extreme conditions require additional grip. Then it is recommended to use chains only at low speeds and remove them when they are not needed anymore (i.e. road transit).

Before installing chains inspect them for sharp edges or welding burs.

Ensure that the chains are at the right tightness. Chains too loose can slip on the tyre and cause excessive wear.

It is important to check that no chain rings are broken or that no individual rings have turned so that calks cut into the tyre. Calks can cut into the tyre also when chains are severely worn and over stretched.

Mounting tyres on four wheel drive tractors

The mounting of tyres on a four wheel drive tractor must be done with great care in order to produce the best driving results and maintain the tyres' service life. Generally, the actual rolling circumference of a front tyre should be 1–4 % higher than the rolling circumference calculated using the gear ratio. Excessive traction in the front tyres can cause quick wear and reduce mileage, while insufficient traction in the front tyres will make the tractor more difficult to steer. Check the manual of the tractor in question for detailed instructions on the calculation of rolling circumferences (gear ratio). When changing the tyre size or type, always check the relationship between the rolling circumferences and make sure that the combination is within the limits given by the manufacturer.

Examples of the calculation

The basis for the calculation is the gear ratio between the front and rear axle, with which the rolling circumference of the required front tyre can be calculated.

Example 1: Calculating the rolling circumference of front tyres

Tyre size Rolling circumference (from tyre manufacturer)

16.9R28 TRI	4222 mm
20.8R38 TRI	5448 mm

Tractor gear ratio: 1.329. The target is 1–5% traction (lead) for front tyres.

$$\frac{5448 \text{ mm (rear tyre rolling circumference)}}{1.329 \text{ (gear ratio)}} = 4099 \text{ mm (no traction)}$$

1% traction:	$1.01 \times 4099 \text{ mm} = 4140 \text{ mm}$
5% traction:	$1.05 \times 4099 \text{ mm} = 4304 \text{ mm}$

The selected tyre 16.9R28 TRI has a rolling circumference (4140 mm < 4222 mm < 4303 mm) which is within the limit given by the manufacturer.

The front tyre's traction is $4222 / 4099 = 1.030$, i.e. 3.0%.

Example 2: Switching to TRI 2 tyres on the above mentioned machine

Gear ratio: 1.329. The target is 1–5% traction for the front tyre.

The control calculation must be verified. It must be noted as well that the TRI 2 and TRI tyres have a different rolling circumference than a correspondent tyre with a lug pattern.

Tyre size Rolling circumference (from tyre manufacturer)

440/80R28 TRI 2	4266 mm
540/80R38 TRI 2	5529 mm

Verification:

$$\frac{5529 \text{ mm (rear tyre rolling circumference)}}{1.329 \text{ (gear ratio)}} = 4160 \text{ mm (traction 0\%)}$$

1% traction:	$1.01 \times 4160 \text{ mm} = 4202 \text{ mm}$
5% traction:	$1.05 \times 4160 \text{ mm} = 4368 \text{ mm}$

The selected tyre 440/80R28 has a rolling circumference (4202 mm < 4266 mm < 4368 mm) which is within the limit given by the manufacturer.

The front tyre's traction is $4266 / 4160 = 1.025$, i.e. 2.5%.

The methods above can be used to check the suitability of new tyres when mounting them on a tractor with a known gear ratio. However, if this vital information is not available, you should contact the tractor's manufacturer or importer.

Nokian CT

Nokian CT – Stability for transporting high loads

High loads and versatile working environments require special properties from a tyre in construction transporting. Nokian CT is a unique solution to heavy earthmoving trailers. Its strength and stability are on class of its own either at challenging conditions on site or on road.

Properties:

- › Wide contact area provides good lateral balance and high flotation on soft surfaces
- › Tread designed for earthmoving endures rocky surfaces as well as high wearing roads
- › Tread grooves have been designed for very good self-cleaning
- › Multiple steel cord layers reinforce tread area against punctures
- › Ultra strong multilayer construction enables high load capacity and functions stable on all circumstances
- › Tread patterns asymmetric block array lowers the noise level on road considerably

- › Tyre carcass has inextensible circumferential triple-layer-steel belt (SB = steel belt).
- › Nokian CT has multi-layer, high-strength radial textile carcass.

Sizes

High load, speed and pressure require equivalent structural strength from the rim. Only use the tyre with a rim specified for sufficient load capacity.

Nokian Country King

Stable and versatile flotation tyre

An efficient and durable flotation tyre for large agricultural machines and trailers. Thanks to good cleaning properties, high load-bearing capacity and low rolling resistance, the tyre moves lightly and economically.

- › A versatile and easily cleaning flotation tyre
- › High load-bearing capacity, sturdy and comfortable driving
- › Low rolling resistance lowers fuel consumption

- › Tyre carcass is stabilized by an inextensible circumferential belt. (SB = steel belt)
- › Ply cords are laid substantially at 90° to the centerline of the tread.

Notice! When more on road than on field choose Nokian Country King. If more on field consider also Nokian ELS Radial.

Nokian ELS Radial

Respecting and protecting the environment

A flotation radial tyre for agricultural machines and trailers. The large contact area, low tyre pressure and the structure and tread pattern efficiently prevents soil compaction. Excellent grip and mobility for soft surfaces.

- › Environmentally friendly flotation tyre for large agricultural machines and trailers
- › Low surface pressure and soil compaction due to the large contact area
- › This sturdy radial tyre endures speed well

Available also as SB (steel belted) version for higher load capacity and more puncture resistance.

Notice! When most driving on fields Nokian ELS Radial is the best solution.

Nokian ELS / Nokian ELS SB tread depth measuring point

Nokian ELS L-1

Durable and environmentally friendly

A reliable partner for modern-day farmers and equipment contractors. Excellent grip, high load-bearing capacity and a pleasant driving response. The low rolling resistance efficiently reduces fuel consumption.

- › Strong cross-ply tyre for traditional agricultural machines and trailers
- › High load-bearing capacity
- › Low rolling resistance lowers fuel consumption

Sizes

- › Nokian ELS L-1 600/50-22.5 12PR - T486051

Nokian ELS L-1 600/50-22.5 12PR – T486051

Container and material handling tyres

The relentless lifting, moving and transporting of heavy loads, requires besides high load bearing capacity absolute precision and stability from the tyres. The much praised wear resistance of our container and material handling tyres is based on thorough material and structure development.

Nokian RTG

Agility and durability for RTG harbour cranes

- › The structure and tread pattern of the stable cross-ply tyre are optimised for RTG harbour cranes
- › Rounded shoulder area with rounded tread block reduces steering forces. The tyre needs less power to steer than traditional harbour tyres for RTG cranes
- › The low heat build-up significantly slows down tyre wear and reduces the risk of tyre damage
- › Low rolling resistance results in low fuel consumption

Tread depth indicator

Sizes

Groove depth indicator Nokian Armor Gard

Regular tyre maintenance is made easier by a groove depth indicator. This indicator helps you monitor tyre wear.

Mining tyres

The world of mining tyres is rough. Uneven surfaces with sharp edges require tyres that offer extreme durability and high load-bearing capacity. Particularly for mining tyres, we have developed the CCR (cut and crack resistant) rubber compound that enhances demanding transportation and mining tasks. The sturdy and stable tyres for mine loaders, drill rigs and various other mining equipment guarantee a long service life.

235 Mine tyre maintenance

NOTICE!

Manual may contain technical information also on omitted products.

Nokian Mine King L-5S

Tyre for extreme underground loading applications

- › More layers to enhance tyre safety in demanding applications
- › New carcass and bead materials enables the increase of maximum inflation pressure up to 8 bar (In 12.00-20 up to 10 bar)
- › Higher load capacity gives possibility to use the tyre in more efficient and heavier machines
- › Tread depth indicator for easy checking of the remaining tread

Remaining tread depth can be easily checked from the tyre side wall.

Notice!

Tread code L-5S
 L – loader and dozen
 5 – extra deep tread
 S – smooth tread pattern

Notice! Nokian Mine King L-5S tyres especially for underground loaders

Excess loads for Loader & Dozer service

Excess loads may result from factors such as actual empty vehicle weight exceeding the manufacturer’s specified empty vehicle weight, varying density of materials, field modifications to the equipment, load transfer, etc. Only under these conditions may the actual in service tyre load exceed the load ratings in the Nokian Mine King L-5S table for the tyre by an amount not greater than shown in the following table:

Nokian Mine King L-5S Diagonal (Bias) Ply	Maximum Excess Loads	
	Load	*Pressure
	15%	30%

*If excess loads are encountered, cold inflation pressure must be increased to compensate for higher loads. For each 1% increase in load, the inflation pressure must be increased by 2%.

- › The inflation pressure should not exceed 800kPa (116psi), except for 12.00-20 Nokian Mine King L-5S 1000kPa (145psi).
- › The above maximum excess loads may result in reduced tyre performance and **must be approved by Nokian Heavy Tyres.**

Nokian Mine L-5S

Power and stability for mining loaders

- › Due to its special rubber compound, this durable tyre is an excellent choice for underground mining loaders and other mining machinery
- › Thick sidewalls with abrasion protection
- › Stable working tyre with a long service life

Notice!

Tread code L-5S
L – loader and dozen
5 – extra deep tread
S – smooth tread pattern

Notice! Nokian Mine L-5S tyres especially for underground loaders

Nokian Nordman Mine L-5S

For efficient and comfortable material loading

- › Durable Bias-Ply structure
- › Cost effective mine tyre – EUR/produced ton
- › Compliant with the EU's REACH regulations
- › Nordman Mine by Nokian Heavy Tyres Ltd

Remaining tread depth can be easily checked from the tyre side wall

Notice! Nokian Nordman Mine L-5S tyres especially for underground loaders

Nokian Mine King E-4

Reliable tyre for underground mining equipment

- › Ready for a long, trouble-free service
- › Strong carcass with a maximum operating pressure of 10 bars
- › Sharp shoulders and large contact area for better grip
- › Deep grooves with a solid middle section enable good puncture resistance and a long service life

Key features

In the tough underground conditions, reliability is the key feature in a tyre. The rugged new Nokian Mine King E-4 gives a lifetime of service for your heavy mining equipment – with no surprises.

Mine tyre maintenance

To utilise the full capacity of a mining tyre, it is recommended to check the inflation pressure at least once a week. Keeping the pressure at a sufficient level prevents tyre break-up caused by high heat generation. Pressure maintenance reduces cuts and cracks on tyre sidewalls by keeping the tyre contour in design width.

It is also recommended to keep a tyre check diary. This makes it easier to determine the interval and the need for maintenance. A diary helps maintenance when machines are operated in several shifts and by different operators. Regular check-ups help in starting repair procedures early enough to save in tyre costs.

When checking the inflation pressure, please observe also the tyre temperature. A rise of 10 degrees centigrade / 50 Fahrenheit will increase the inflation pressure approximately 0,1 bar / 1,0 psi Use only reliable and calibrated pressure gauges. A regular gauge re-calibration should also be performed.

A cut on a tyre sidewall, caused in example by sharp stones, should always be repaired before it proceeds to let moisture reach into the tyre reinforcing cords.

Narrow mine tunnels often wear tread more from the outer side of a tyre. It is recommended to swap tyres from one side to the other to gain more tyre hours.

The Nokian Mine L-5S features a tread wear indicator. Besides this it is also recommended to mark the actual tread wear (mm / in) into the tyre check diary.

In handling a TL (tubeless) tyre make sure that the rim is not damaged. Even a small abrasion on a tyre by a damaged or a faulty rim can lead to excessive air leak. A defective rim is always a serious safety hazard. With a TL tyre always use a tubeless rim.

Notice! Regular inflation pressure maintenance ensures long service life.

Earthmoving and road maintenance equipment tyres

Nokian Heavy Tyres produces tyres for wheel loaders, excavators, graders, backhoe loaders and waste treatment machines. These tyres offer supreme grip, driving comfort and durability. Tools for effortless and efficient contracting.

Nokian Hakkapeliitta Loader

Winter tyre for wheel loaders

- › Open block design creates excellent self-cleaning
- › Aggressive tread design creates reference level lateral and traction grip
- › New compound and more rubber in the tread creates better grip and increased lifetime
- › Re-designed carcass structure gives more lifetime and better stability
- › Siped non-directional thread design with pre-marked stud position

Nokian Loader Grip 3

High traction special tyre for articulated wheel loaders and dump trucks

- › Nokian Loader Grip 3's sharp edged pattern design provides high non-directional traction for great productivity and safety
- › Strong sidewalls with extra protective rib
- › Groove geometry is designed for excellent self-cleaning
- › Optimal tread-block size offers great ground contact and All-Steel construction provides long service life

Nokian Loader Grip 3 tread depth indicator

Nokian Armor Gard

Long service life for material handling equipment and loaders

- › Precise and stable driving response
- › Durable carcass
- › Good traction
- › Record-breaking mileage
- › With groove depth indicator

Groove depth indicator Nokian Armor Gard

Regular tyre maintenance is made easier by a groove depth indicator. This indicator helps you monitor tyre wear.

Nokian TRI 2

Reliable performance all year round

A reliable partner for modern-day farmers and equipment contractors. Excellent grip, high load-bearing capacity and a pleasant driving response. The low rolling resistance efficiently reduces fuel consumption.

- › Versatile and environmentally friendly special tyre designed for the needs of modern farming and machine contracting
- › Excellent grip, high load-bearing capacity and a pleasant driving response
- › Sturdy and fast also on the road (max. 65 km/h / 40 mph)
- › Good self-cleaning

Nokian TRI 2 tread depth measuring point on top of tie-bar

Nokian Hakkapeliitta TRI

Precise control and great efficiency

The first winter tyre for tractors, Nokian Hakkapeliitta TRI, gives you all the grip you can get. Featuring all new rubber compound, tread pattern and contact profile, it's designed for single purpose: to give you all the grip, control and efficiency you need for demanding winter contracting.

- › Precise control and great efficiency
- › Driving comfort on class on its own
- › Superior traction and lateral grip

Nokian TRI 2 Extreme Steel

EXTREME STEEL BELTED

- › Tread rubber designed for extreme conditions, requiring constant use of chains, chain recommendation: Easy-chain from different chain manufacturers, all chain material under 9 mm by diameter
- › Excellent wear resistance against tear and wear in rough on and off the road conditions
- › Steel belts give good puncture resistance to tread area
- › When used without chains the present TRI 2 has better winter grip

Sizes

- › Nokian TRI 2 Extreme Steel 400/80R24 – T445530
- › Nokian TRI 2 Extreme Steel 440/80R24 – T445531
- › Nokian TRI 2 Extreme Steel 440/80R28 – T445532
- › Nokian TRI 2 Extreme Steel 480/80R34 – T445533
- › Nokian TRI 2 Extreme Steel 480/80R38 – T445534
- › Nokian TRI 2 Extreme Steel 540/80R38 – T445535

Nokian Excavator

Excavator tyre for soft surfaces

- › Steel fortified against rocks and stubs
- › Open pattern with excellent cleaning properties helps in muddy and wet conditions
- › Reinforced shoulder area against impacts
- › High load capacity and improved stability
- › Variable angle lug pattern design with reinforced center area for better traction

Nokian Excavator with steel fortification

- › The tyre carcass is protected by steel fortification (SF).
- › Multiple ply cords are laid at alternate angles substantially less than 90° to the centerline of the tread.

Notice! Not for forestry use.

Sizes

- › Nokian Excavator 600/50-22.5 20PR – T445633

IMPORTANT!

Nokian Excavator tyres must be used only with certified rims for load capacity, speed and inflation pressure. The rim contour must be certified by fitting trials made by Nokian Heavy Tyres Ltd. After 1.1.2018 claims on fitting damages will not be accepted on non-approved rims. Please consult Nokian Heavy Tyres technical customer service for latest information on approved rims.

The following complete wheels / rims are approved and available by Nokian Heavy Tyres Ltd

Complete wheels	Tyre	Rim			
		Rim code	Width	Offset	Color
HTWS00205	600/50 - 22.5 Nokian Excavator TL	HTRS00133	AG 20.00x22.5	0 mm	White aluminium

Nokian TRS LS-2 SF Excavator

Notice! Not for forestry use.

For excavators in forestry applications always use 20 PR forestry tyres. **See forestry tyres.**

Reliable traction

- › Tubeless tyre for excavators
- › Excellent tractional features for road contracting and agriculture
- › Cut resistant compound
- › Steel fortified against punctures

Nokian TRS LS-2
Excavator tread depth
measuring point on
top of tie-bar

Nokian TRS LS-2 Excavator with steel fortification

- › The tyre carcass is protected by steel fortification (SF).
- › Multiple ply cords are laid at alternate angles substantially less than 90° to the centerline of the tread.

Nokian Forest Rider

Efficiency for versatile forestry contracting, tractors and forestry machines

- › A sturdy and stable radial special tyre for heavy forest-use tractors and forestry machines
- › A more pleasant and smoother driving response than with traditional forestry tyres, which enhances the comfort and ergonomics of use in versatile harvesting and forest soil cultivating tasks
- › High load capacity
- › Low rolling resistance reducing fuel consumption
- › Excellent traction and grip thanks to radial structure and optimised lug angle

Radial Tyre

The tyre carcass is stabilized by an inextensible circumferential belt (SB = steel belt).

- › Sidewall puncture protector.
- › The ply cords are laid substantially at 90° to the centerline of the tread.

Sizes

More information on the **Nokian Forest Rider** sizes is available in the **Forestry tyres** section on **page 81**.

Nokian CT

Nokian CT – Stability for transporting high loads

High loads and versatile working environments require special properties from a tyre in construction transporting. Nokian CT is a unique solution to heavy earthmoving trailers. Its strength and stability are on class of its own either at challenging conditions on site or on road.

Properties:

- › Wide contact area provides good lateral balance and high flotation on soft surfaces
- › Tread designed for earthmoving endures rocky surfaces as well as high wearing roads
- › Tread grooves have been designed for very good self-cleaning
- › Multiple steel cord layers reinforce tread area against punctures
- › Ultra strong multilayer construction enables high load capacity and functions stable on all circumstances
- › Tread patterns asymmetric block array lowers the noise level on road considerably

Sizes

More information on the **Nokian CT** sizes is available in the **Agricultural tyres** section on **page 146**.

- › Nokian CT 560/60R22.5 – T445626
- › Nokian CT 600/60R30.5 – T445629
- › Nokian CT 600/50R22.5 – T445627
- › Nokian CT 650/55R26.5 – T445556
- › Nokian CT 600/55R26.5 – T445628

- › Tyre carcass has inextensible circumferential triple-layer-steel belt (SB = steel belt).
- › Nokian CT has multi-layer, high-strength radial textile carcass.

Contact areas on a hard driving surface

TRI patterns have a significantly larger net contact area compared with traditional tractor drive tyres. This results in significant improvement in friction rate, grip, and wear rate.

Ground contact area ratios

Normal tractor drive tyre

20–25 % net contact area

Normal section TRI

80 series TRI 2

39 % net contact area

80 series Hakkapeliitta TRI

45 % net contact area

Contact areas on a hard driving surface

Contact area on hard surface

The deflection takes place only on the tyre and not at all on the ground. The values in the table are valid at the nominal load and air pressure conditions.

Contact area on soft soil

The deflection takes place mainly on the ground: the tyre sinks 15% of its diameter into ground, but the deflection will recover to half of the original value. It is impossible to compare actual measurements in different places, but comparison between different tyre sizes is possible with the help of the table below. Compared to the corresponding standard dimension TRI 2 tyre commonly gives an appr. 5–10% larger contact area. 65 series tyres will give an approximately 20–30% larger area compared to corresponding sizes with a normal section.

Studs and chains

Studs

Nokian TRI 2 and Nokian TRI patterns offer an excellent winter grip. To gain even more traction and grip in extreme wet icy conditions the tyres can be studded. The following schematic pictures show the studding sequence.

Stud recommendation

- › Recommended types are truck, tractor or construction machine studs
- › Maximum stud length is 25 mm / 1 in
- › Minimum stud flange is 9 mm / 11/32 in

Stud dimensioning examples

Stud marking	Stud length		Flange diameter		Stud hole diameter		Stud protrusion

Chains

It is recommended to use chains only for short periods at a time. Chains shorten the tyre lifetime. Nokian Heavy Tyres limited warranty doesn't cover any damages made by accessories including the use of chains.

The use of chains comes into question when extreme conditions require additional grip. Then it is recommended to use chains only at low speeds and remove them when they are not needed anymore (i.e. road transit).

Before installing chains inspect them for sharp edges or welding burrs.

Ensure that the chains are at the right tightness. Chains too loose can slip on the tyre and cause excessive wear.

It is important to check that no chain rings are broken or that no individual rings have turned so that calks cut into the tyre. Calks can cut into the tyre also when chains are severely worn and over stretched.

Mounting tyres on four wheel drive tractors

The mounting of tyres on a four wheel drive tractor must be done with great care in order to produce the best driving results and maintain the tyres' service life. Generally, the actual rolling circumference of a front tyre should be 1–4 % higher than the rolling circumference calculated using the gear ratio. Excessive traction in the front tyres can cause quick wear and reduce mileage, while insufficient traction in the front tyres will make the tractor more difficult to steer. Check the manual of the tractor in question for detailed instructions on the calculation of rolling circumferences (gear ratio). When changing the tyre size or type, always check the relationship between the rolling circumferences and make sure that the combination is within the limits given by the manufacturer.

Examples of the calculation

The basis for the calculation is the gear ratio between the front and rear axle, with which the rolling circumference of the required front tyre can be calculated.

Example 1: Calculating the rolling circumference of front tyres

Tyre size Rolling circumference (from tyre manufacturer)

16.9R28 TRI	4222 mm
20.8R38 TRI	5448 mm

Tractor gear ratio: 1.329. The target is 1–5% traction (lead) for front tyres.

$$\frac{5448 \text{ mm (rear tyre rolling circumference)}}{1.329 \text{ (gear ratio)}} = 4099 \text{ mm (no traction)}$$

1% traction:	$1.01 \times 4099 \text{ mm} = 4140 \text{ mm}$
5% traction:	$1.05 \times 4099 \text{ mm} = 4304 \text{ mm}$

The selected tyre 16.9R28 TRI has a rolling circumference (4140 mm < 4222 mm < 4303 mm) which is within the limit given by the manufacturer.

The front tyre's traction is $4222 / 4099 = 1.030$, i.e. 3.0%.

Example 2: Switching to TRI 2 tyres on the above mentioned machine

Gear ratio: 1.329. The target is 1–5% traction for the front tyre.

The control calculation must be verified. It must be noted as well that the TRI 2 and TRI tyres have a different rolling circumference than a correspondent tyre with a lug pattern.

Tyre size Rolling circumference (from tyre manufacturer)

440/80R28 TRI 2	4266 mm
540/80R38 TRI 2	5529 mm

Verification:

$$\frac{5529 \text{ mm (rear tyre rolling circumference)}}{1.329 \text{ (gear ratio)}} = 4160 \text{ mm (traction 0\%)}$$

1% traction:	$1.01 \times 4160 \text{ mm} = 4202 \text{ mm}$
5% traction:	$1.05 \times 4160 \text{ mm} = 4368 \text{ mm}$

The selected tyre 440/80R28 has a rolling circumference (4202 mm < 4266 mm < 4368 mm) which is within the limit given by the manufacturer.

The front tyre's traction is $4266 / 4160 = 1.025$, i.e. 2.5%.

The methods above can be used to check the suitability of new tyres when mounting them on a tractor with a known gear ratio. However, if this vital information is not available, you should contact the tractor's manufacturer or importer.

Multipurpose tyres

With all-terrain trucks and military vehicles, you never know what weather or terrain lies ahead. That's why Nokian Tyres puts lots of creative passion into developing and customising our line of all-terrain tyres. With the expertise gained over the years and feedback from users, we have been able to create designs that give you the best possible performance on any terrain, any time of the year.

Nokian MPT Agile

Load-carrying capacity for off-road trucks and armoured vehicles

- › Both road and off-road use
- › Good steering response
- › Low noise level
- › Excellent wear resistance
- › Excellent mobility for summer and winter
- › Developed for use also with studs and chains

Stud recommendations

1) Nokian MPT Agile tyres are part of the truck tyre norm. Therefore:

Recommended stud for truck tyres has a length of 15 mm / 19/32 nds of an inch and flange diameter of 11 mm / 14/32 nds of inch.

Stud				Drilled stud hole			
Length		Flange diameter		Diameter		Depth	
mm	32 nds in	mm	32 nds in	mm	32 nds in	mm	32 nds in
15	19	11	14	5	6	13	16

2) Nokian MPT Agile tyres used in Military or i.e. Fire Truck applications can also be used with 13 mm / 16/32 nds of inch flange studs.

This larger flange diameter gives better overall performance, but often requires special approval for the use.

Stud				Drilled stud hole			
Length		Flange diameter		Diameter		Depth	
mm	32 nds in	mm	32 nds in	mm	32 nds in	mm	32 nds in
15	19	13	16	6	8	13	16

3) Stud amount in tyres (EU / since 1st July 2009):

Maximum of 50 pcs of studs allowed for every 1 m / 39,4 inch of tyre circumference.

With the MPT Agile pattern type, the amount of studs:

365/80R20 MPT Agile	171 pcs max (evenly distributed 168 pcs)
14.00R20 MPT Agile	198 pcs max (evenly distributed 192 pcs)

Truck tyre stud (max. 3 g / 0,1 oz)

Stud places in MPT tyres

- = Normal stud places, 144 in total
- ✕ = Additional stud places, 72 pcs

Notice! Please check your local legislation on stud use.

Special applications

General information includes:

300 Nokian TRI 2 trailer

307 Nokian Forest Rider trailer

NOTICE! Manual may contain technical information also on omitted products.

Nokian TRI 2 trailer

Load capacity values for implement (free rolling) use

NOTICE! Top speed 50 km/h / Max inflation pressure 4.0 bar

General info

Nokian Heavy Tyres is passionate in developing high quality solutions for the most extreme conditions found in forests, modern day farming, municipal contracting, transportation terminals and underground applications. In addition to tyre and supplementary item information, this manual focuses on the special necessities and requirements in each product category. The forestry section, for example, has a detailed guide on the right tyre and inflation pressure choice by application.

This technical manual will be your tool in finding the right tyre for your work, with a promise on carefree working hours.

Contents

General info

313 Tyre markings
318 Tyre structures
319 Inflation pressure

320 Liquid and salt ballasting
321 Non-skid chains
322 Tracks

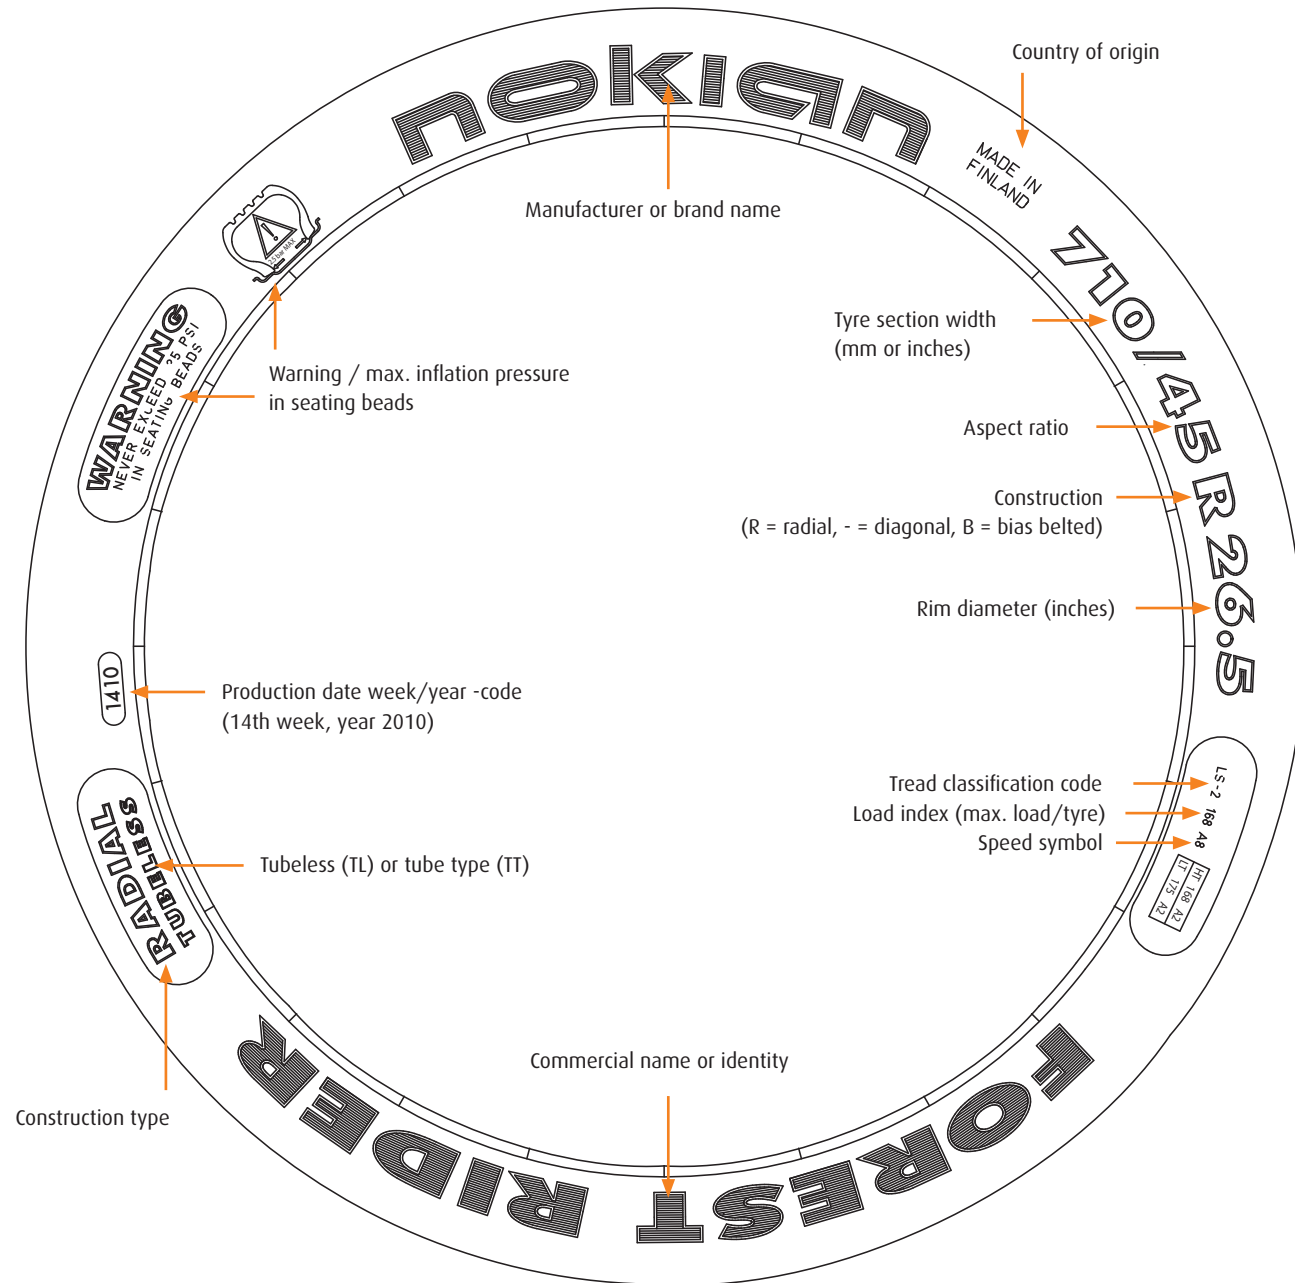

323 Tire Pressure LED™
324 Rims
335 Tubes and valves

337 Ground contact pressure comparison
340 How to use load capacity tables?
342 Limited warranty

NOTICE!

Manual may contain technical information also on omitted products.

Tyre markings

Tyre markings

Tyre classification codes

Optional marking

TRA Code	Tread type
Agricultural tractor drive wheel tyres	
R-1	Regular service (tread)
R-1W	Wet traction service
R-1S	Sprayer / spreader service
R-2	Cane and rice service (deep tread)
R-3	Flotation service (shallow tread)
R-4	Industrial service (construction application)
Agricultural tractor steering wheel tyres (non-traction pattern)	
F-1	Single rib tread
F-2	Multiple rib tread
F-3	Industrial service (construction application)
Agricultural implement tyres	
I-1	Multi-rib tread
I-2	Moderate traction service
I-3	Traction tread
I-4	Plough tail wheel service
I-5	Steering service
I-6	Smooth tread
Garden tractor tyres (implement tyres)	
G-1	Traction service
G-2	Flotation traction service
G-3	Maximum flotation service

TRA Code	Tread type
Grader tyres (Motor graders)	
G-2	Traction regular
G-3	Rock Regular
Logging and forestry service tyres	
LS-1	Regular tread
LS-2	Intermediate tread
LS-3	Deep tread
LS-4	Shallow tread
High flotation tyres for off-the-road service	
HF-1	Shallow tread
HF-2	Regular tread
HF-3	Deep tread
HF-4	Extra deep tread
Earthmover tyres (Dump trucks and scrapers)	
E-1	Rib regular
E-2	Traction regular
E-3	Rock regular
E-4	Rock deep tread
E-7	Flotation

TRA Code	Tread type
Loader and dozer tyres (Front-end loaders and dozers)	
L-2	Traction regular
L-3	Rock regular
L-4	Rock deep tread
L-5	Rock extra deep tread
L-4S	Smooth deep tread
L-5S	Smooth extra deep tread
Compactor tyres	
C-1	Smooth
Industrial tyres (Straddle carriers, transfer cranes, towing tractors, reach stackers and fork lifts)	
IND-3	Traction regular
IND-4	Deep tread
IND-5	Extra deep tread

Tyre markings

Example

157 A8 a tyre can carry maximum 4 125 kg / 9 100 lb at the maximum speed of 40 km/h / 25 mph.

Load index

The **LOAD INDEX (LI)** is a numerical code associated with the maximum load a tyre can carry.

LI	kg	lbs	LI	kg	lbs	LI	kg	lbs	LI	kg	lbs	LI	kg	lbs	LI	kg	lbs	LI	kg	lbs	LI	kg	lbs

Tyre markings

Units

Quantity	S.I. units	Other units
Length	m (metre)	1 inch (") = 0.0254 m (or 25.4 mm)
		1 mile = 1 609 m (or 1.609 km)
Mass	kg (kilogram)	1 pound (lb) = 0.4536 kg
Pressure	Pa (Pascal)	1 bar = 100 kPa
		1 pound per square inch (psi or lb/in ²) = 6.895 kPa
		1 kg/cm ² = 98.066 kPa
Speed	m/s (metre per second)	1 km per hour (km/h) = 0.27778 m/s
		1 mile per hour (mph) = 0.4470 m/s (or 1.60935 km/h)

Pictogram

Marked on both tyre sidewalls

Explicitly the maximum inflation pressure not to be exceeded for bead seating during tyre mounting. The value of inflation pressure (2.5 bar in the example) must be the same as specified by the tyre manufacturer.

Speed symbol

The SPEED SYMBOL (SS) indicates the maximum speed at which the tyre can carry a load corresponding to its Load Index.

SS	km/h	mph

* Values in psi and kg/cm² rounded to the nearest practical unit.

Tyre structures

Radial Tyre

The tyre carcass is stabilized by an inextensible circumferential belt.

The ply cords are laid substantially at 90° to the centerline of the tread.

Diagonal (or bias ply) tyre

The ply cords are laid at alternate angles substantially less than 90° to the centerline of the tread.

Bias belted

The tyre carcass is stabilized by an inextensible circumferential belt.

Tyre structure of diagonal tyre.

Inflation pressure

Choosing the right inflation pressure

Maintaining the proper tyre inflation pressure

The inflation pressures of tyres should be checked carefully at regular intervals. Perform a visual check daily and repeatedly when operating. A slow leak can cause damage to the tyre sidewall or lead to tube failure before the under-inflation can be felt in the handling of the machine.

Repairable damage should be repaired immediately in order to help obtain regular tyre life. When operating machinery in winter conditions, it should be kept in mind that when temperatures decrease, so do tyre inflation pressures. Consequently, when inflating a tyre indoors in winter, it should be inflated slightly over the recommended pressure. The diagram below should prove of assistance in determining the correct pressure.

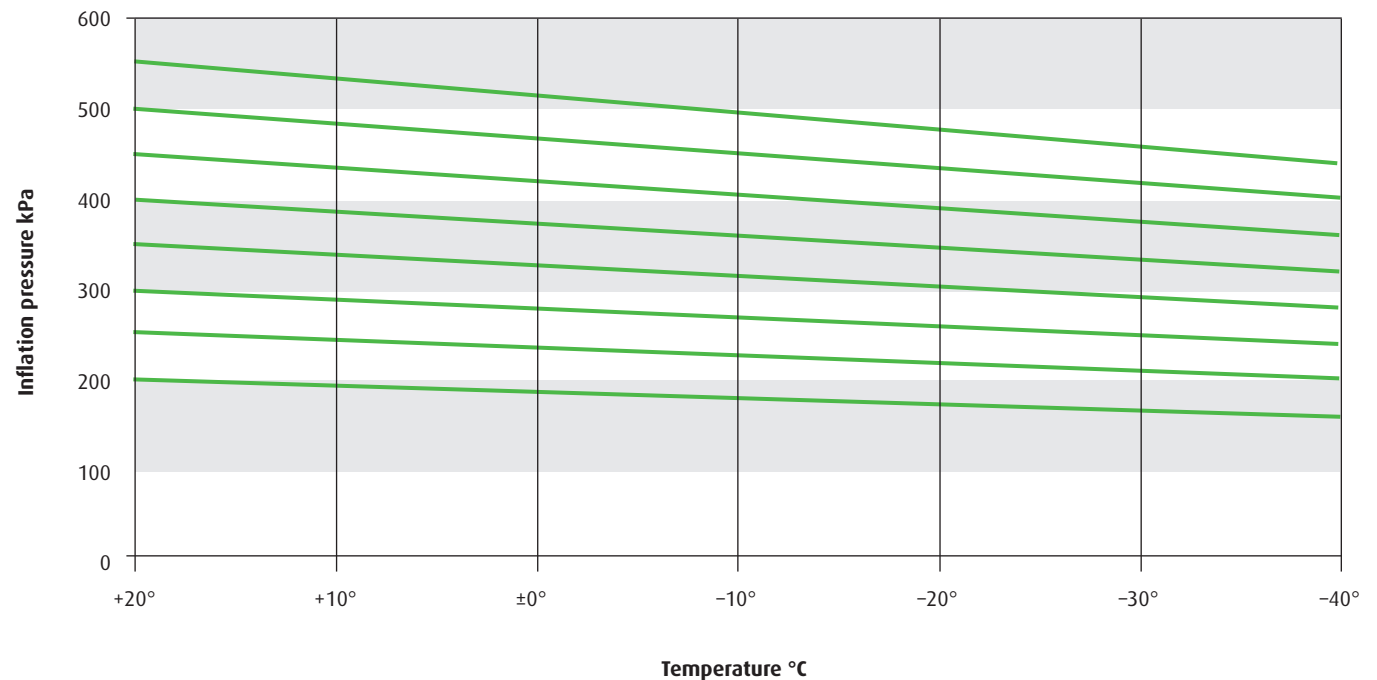

Ground disturbance

Ground disturbance is more pronounced when operating in soft soil conditions. When the tyre gets in contact with the ground on a hard surface, it is the tyre that gets depressed, whereas when operating on soft soil, the ground gets depressed. The inflation pressure used does not have much of an effect on the size of the footprint. The inflation pressure should be less than the ground pressure between the ground and the tyre, in case approx. 55 kPa, for it to reduce the depth of the footprint.

Consequently, it is not advisable to reduce tyre inflation pressures in order to improve the machine's footprint, as it has a negative impact on the tyre's service life. The use of wider tyres will serve this purpose better.

Notice! Use always recommended inflation pressure i.e. winter ambient average -25°C or in summer time $+30^{\circ}\text{C}$.

The relationship between tyre inflation pressure and air temperature

Liquid and salt ballasting

Liquid and salt ballasting

- › Liquid ballasting is used to increase machine stability.
- › It is recommended to use professional tyre outlets to carry out the filling procedure.
- › Special equipment and water permeable valves are required.
- › In liquid and salt ballasting, use tubes to prevent rims from rusting.

Note! If a filler other than liquid is used (i.e. polyurethane), tyre warranty does not apply.

Water ballasting

75 % of tyre volume is filled. Amounts listed in the table below.

Water and salt ballasting

The addition of salt will prevent freezing. 75% of tyre volume is filled with the proportions given in the table below. The salt / water solution is calculated at a temperature of -30 °C / -22 °F.

Normal commercial salt (CaCl₂), 77% purity, is used.

Any additional salt will not necessarily dissolve in water.

The remaining tyre volume is inflated to the recommended inflation pressure.

Notice! Since tyre has air only 25% of the original volume, regular inflation pressure checks are highly recommended.

Non-skid chains

Nowadays, the general tendency is to work increasingly without chains. This in turn places additional demands on forestry tyre selection in order to ensure access to difficult terrain while, at the same time, minimising ground disturbance. In practise, however, there are situations when the use of chains cannot be avoided. In such cases, it is important to pay attention to some basic considerations.

Use of chains

Before installing new chains, it is recommended that they be inspected for sharp edges or welding burrs. When installing chains on a tyre, it is important to ensure that the chains are sufficiently tight. Chains that are too loose can slip on the tyre causing excessive wear. Checking the functioning of old and worn chains is recommended from time to time as well. It is important to check that no chain rings are broken and that none of these individual rings have turned, so that their calks cut into the tyre. The same damage can occur with severely worn and thus overstretched chains.

Tracks

Track manufacturers give their recommendations in slightly different ways. The practice, that is becoming increasingly common, is where track manufacturers specify their products according to the tyre manufacturer, the tread design and the tyre size. The minimum requirement is that the track manufacturer provide the tyre size and the tread design for each track type.

When acquiring tracks, it is extremely important for the user to select the correct track type which is suitable for the tyre

and that the operating pressure, in particular, meets the recommendations of track manufacturers. When selecting tracks, it is recommended that the user contacts the track manufacturer.

When using tracks the correct pressure level is the maximum permitted inflation pressure for each tyre size.

Recommended inflation pressures when using tracks

Tyre size	PR	LI / SS		
500/60-22.5	16		430 kPa	62 psi
600/50-22.5	16	151 A8 / 158 A2	430 kPa	62 psi
700/45-22.5	16		390 kPa	57 psi
710/40-22.5	16	154 A8 / 161 A2	390 kPa	57 psi
710/40-24.5	20	163 A8 / 170 A2	550 kPa	80 psi
600/55-26.5	16		460 kPa	67 psi
700/45-26.5	16		460 kPa	67 psi
710/45-26.5	16	161 A8 / 168 A2	460 kPa	67 psi
600/55-26.5	20	165 A8 / 172 A2	550 kPa	80 psi
650/65-26.5	20	172 A8 / 179 A2	550 kPa	80 psi
700/50-26.5	20		550 kPa	80 psi
710/45-26.5	20	168 A8 / 175 A2	550 kPa	80 psi
750/55-26.5	20	177 A8 / 184 A2	550 kPa	80 psi
780/55-26.5	20	179 A8 / 186 A2	550 kPa	80 psi
800/40-26.5	20	170 A8 / 177 A2	550 kPa	80 psi
650/45R24.5		161 A8 / 168 A2	550 kPa	80 psi
600/55R26.5		165 A8 / 172 A2	550 kPa	80 psi
710/45R26.5		168 A8 / 175 A2	550 kPa	80 psi
800/50R26.5		180 A8 / 187 A2	550 kPa	80 psi

Notice! Contact the track manufacturer for the correct track for your tyre.

See also Tyre choice and inflation pressures by application.

Tire Pressure LED™

Tyre pressure drop warning system

Tire Pressure LED

- › Easy tyre pressure check available on all Nokian tyres
- › Easy to use
- › Reduces tyre maintenance
- › Reduces tyre break-ups
- › Saves money

How to use

- › First adjust the tyre pressure to the recommended value.
- › Screw the Tire Pressure LED tight by hand, using the anti-theft tool provided with the kit.
- › The Tire Pressure LED is now calibrated and is constantly monitoring the tyre pressure.

What to do when LED starts flashing

- › Unscrew the Tire Pressure LED with the anti-theft tool.
- › Adjust the tyre pressure to the recommended value.
- › Reinstall the Tire Pressure LED.

Notice!

The LED value caps are an aid in monitoring tyre pressure. The instructions on tyre pressure maintenance in vehicle owners manual should still be followed.

Benefits

- › Constant pressure control.
- › No need for regular pressure gauge checks anymore.
- › The led indicates the need for pressure adjustment.
- › Increase in tyre and tube lifespan due to right operating pressure.
- › No more tyre break-ups due to running tyres underinflated.

Technical properties

- › Led activated when a drop from the calibrated value exceeds 0.3 bar / 4.4 psi (T845503) or 0.6 bar / 8.7 psi (T845504 and T845505).
- › Battery used only when led is activated (pressure drop).

For Agricultural vehicles / 4 pcs / pack

Product code	Manufacturer code	Pressure range
T845503	SSVC-4 NA	0.7–5.0 bar 10–70 psi

For Forestry vehicles / 4 pcs / pack

Product code	Manufacturer code	Pressure range
T845504	TSVC-4 NF	4–12 bar 60–175 psi

For Large Bore Valve Vehicles / 2 pcs / pack

Product code	Manufacturer code	Pressure range
T845505	TSVC-2 NL	4–12 bar 60–175 psi

Transparent Cap for use with R2" valve protector (2.5.4 Valve protectors)

Rim markings

Disc wheels and demountable rims shall be marked with the following information:

- a) Rim size designation
- b) Wheel/rim manufacturer (name, symbol or trademark)
- c) date of manufacture
- d) part number or code

Rings shall be marked with the following information:

- a) Identification of rim to which the part may be fitted
- b) Identification of manufacturer
- c) Date of manufacture
- d) Flange height designation (on side rings for EM rims)

Notice!

With recommended rim you get the best operational result from your tyre. You may use also permitted rim as an alternative.

Notice!

- indicates multi-piece rim.
x indicates one-piece rim.

Rim marking			Rim contour		Nominal diameter code	Special features
			Width code	Profile		
6½J x 15 H2	or	15 x 6½J H2	6½	J	15	Asymmetrical drop-centre, double hump (H2). (if S=symmetrical)
22.5 x 7.50			7.5		22.5

Disc hole definition (mm)

281-335-25,4-10 AR18-32

Offset is the distance from the rim centerline to the hub mounting surface
 + offset decreases track width
 - offset increases track width

Rims

Rim contours

There are mainly two types of rims used with Nokian Heavy Tyres products. Wide well-base and flat-base contour designs.

1. Wide well-base (W and DW)

DW rim

W (wide well) and DW (deep well) rim contours

W or DW?

DW facilitates better the mounting of high PR (stiffer construction) tyres.

DW rims also have higher strength compared with W rims, due to more bends in the contour shape.

2. Flat base rims

Flat base rims are generally of divided construction or equipped with lock rings.

Flat base rim

Flat base rim contour

Rims

Standards

Tyres are designed for use on rims that meet the industry standards. It is the responsibility of the vehicle manufacturers and vehicle users that rims used comply with these standards.

The right tyre and rim combination defined in these standards guarantees a proper mounting and fit of tyre on the rim. Standards manuals give the proper rim dimensions and the right rim contours for use on each tyre size and service condition.

Rims and wheels may be stamped with maximum load and maximum cold inflation ratings. If these are not identified consult the rim and wheel manufacturer for rim and wheel capacities for the intended service.

Tyre and rim standards manuals.

- TRA:** The Tire and Rim Association Inc.
ETRTO: The European Tyre and Rim Technical Organisation
JATMA: The Japan Automobile Tyre Manufacturers Association Inc.
STRO: The Scandinavian Tyre & Rim Organization

Information needed for defining a wheel

A wheel consists of a rim and a disc. Rim contours are standardised and differ from each other according to the service type. Wheel discs are characterised by the offset position, attachment and centre hole.

To define a wheel for a certain application, the following information is needed by the wheel manufacturer:

Information from the tyre manufacturer:

1. Tyre size, loading requirements and service type
2. Nominal width code (inch)
3. Diameter code (inch)
4. Tubeless or tube-type tyre

With this tyre information the rim contour can be designed.

Information from the vehicle manufacturer:

5. Offset
6. Disc centre hole
7. Attachment (bolt circle diameter, bolt hole size, bolt hole type)
8. Wheel loading and maximum speed requirements
9. Valve hole placement, type of valve preferred and need for valve protection
10. The wheel colour

With this information a standard or a tailored wheel can be defined.

Notice! When in doubt consult rim and wheel manufacturer for confirmation on the strenght of the rim/wheel for the intended service.

Rims

Wheel parts / components

Single piece wheel

W rim with 2 humps (H2)

Multi-piece wheel

(also referred to as industrial or lock ring wheel)

› **3-piece rim** / bead seat ring, side ring and lock ring the same component

› **4-piece rim** / bead seat ring and lock ring the same component

› **5-piece rim** / all parts separate

The amount of separate rings required is often based on the wheel loading requirements.

Note! Industrial wheels have an inflation maximum of 10 bar (145 psi).

Rims

Wheel parts / components

Notice!

Wheel, when disc included.
Rim, when no disc included.

Valve protectors

In tough operating conditions, i.e. forestry a R2" thread valve protector is commonly used. A transparent cap enables the use of LED pressure warning device.

R2" valve protector

Transparent cap for R2"

Other types of valve protectors depending on user preferences

Rims

Forestry rims

Examples of typical forestry rim sizes:

AG 22.00 x 22.5 All 15° tapered
 AG 24.00 x 24.5
 AG 24.00 x 26.5
 AG 28.00 x 26.5

DW 20 B x 26 All 5° tapered
 DW 25 B x 26
 DW 23 B x 34
 DW 24 B x 34

AG = agricultural rim contour (drop centre rims)
DW = deep well rims

15° tapered in diameter codes xx.5
 5° tapered in diameter codes xx

Reinforcements

Rims used in professional logging operations are recommended to have contour flange reinforcements. These add load carrying capacity and protect flanges against impacts.

1) Rim diameters 24,5" and larger

Recommendation: Flat bar steel on the outside flange. Round steel / tube edge / long rolled flange on the inside flange.

2) Rim diameters smaller than 24,5"

Recommended reinforcements depending on loading and operating conditions. Types:

- > Round steel
- > Tube flange edge
- > Long rolled flange edge

Forestry rim with flat bar steel reinforcement

Rims

Knurling

Knurling has been designed to prevent tyre slippage on rim caused by the inherent traction force on the wheel. To produce the desired effect, knurling must extend beyond the surface of the rim bead seat.

Knurling for tyre slippage on rim prevention

Other methods to prevent tyre slippage on rim

- › Friction paint on bead area
- › Paint removed from bead area

Recommendations for knurling use on 5° tapered rim contours

Rim width	Rim Diameter	Rim Diameter 24" and larger
13" and smaller	Upon request	Upon request
14" and larger	Upon request	Always

Knurling conditions (ETRTO)

Notice!

For preventing tyre slippage on rim:

1. Proper inflation pressure.
2. Use high quality standards fulfilling rims.

Rims

Tubeless forestry rims

With the introduction of radial forestry tyres (Forest Rider), Nokian Heavy Tyres is able to offer tubeless wheels for forestry.

Advantages:

1. No need for tubes and regular tube maintenance
2. No tube valve break-ups from occasional tyre wheel spins in severe high torque conditions.
3. If a wheel spin should occur it has no effect on wheel functionality

A tubeless forestry rim has 3 differences compared with a standart similar contour agricultural rim.

1. Rim flange reinforcements
2. Knurling
3. 15° tapered rims with wider hump dimensioning to accomodate stiffer and wider tyre bead area.

Traditional agricultural rim hump dimensioning

Forestry rim hump dimensioning to accomodate wider tyre base

Notice!

Rims with wider hump can be used also in agricultural and forestry trailer tyres.

5° tapered rims don't require humps to perform as tubeless (i.e. 34" Forest Rider sizes).

Rims

Agricultural rims

Agricultural rims are TL (tubeless) type. Rim material, rim shape (contour) and material thickness are based on wheel loading requirements.

Examples of agricultural rim sizes:

13.00 x 15.5 All 15° tapered agricultural rim sizes are equipped with humps.

16.00 x 17 5° tapered sizes dont require humps for tubeless use.

- AG 13.00 x 22.5
- AG 20.00 x 26.5
- DW 13 x 24
- DW 16 x 34

Industrial rims

Examples of typical industrial rim sizes:

20", 24", 25", 33" lock rings

- 10.00 WA - 24 /2.0
- 10.00VA - 24 HD
- 10.00V - 20
- 11.00DC - 20
- 13.00 - 25 /2.5 HD
- 14.00 - 25 /1.3
- 8.0 - 20
- 8.5 - 20

Multi-piece rims 20" and 24"

Generally tube-type wheels, requiring a tube and a flap.

Examples of tyre sizes:

- 12.00 - 20
- 14.00 - 24

Flap	Flap product code	Tyre sizes
170-20	T299520	9.00-20, 10.00-20, 11.00-20
195-20	T299530	11.00R20 (rims 7.0-7.5), 12.00-20
225-20	T299537	10.00R20 (rim 8.0), 12.00R20 (rim 8.0)
260-20	T299538	12.00R20 (rims 8.5 - 9.0) 14.00-20, 14.00R20
260-24/25	T299531	13.00-24, 14.00-24, 16.00-24, 16.00-25
430-25	T299540	20.5-25

*) Flap valve hole made afterwards depending on required positioning

Tube-type on a multi-piece rim

Multi-piece rims 25" and 33"

Generally tubeless wheel, requiring a sealant ring (o-ring)

Examples of tyre sizes:

- 17.5 R 25
- 16.00 R 25
- 18.00 - 25
- 18.00 - 33

Rims

Inspections on rims

Allowed wheel radial- / lateral run-outs

Tolerances of the rim radial-/lateral run-out in agricultural and industrial use.

Nominal rim diameter	STRO radial / lateral		DIN 7823 radial / lateral	
	mm	32 nds in	mm	32 nds in
15" - 20"	2.5 / 2.5	3.2 / 3.2	3.5 / 3.5	4.4 / 4.4
22" - 28"	3.5 / 3.5	4.4 / 4.4	3.5 / 3.5	4.4 / 4.4
30" - 38"	5.0 / 5.0	6.3 / 6.3	5.0 / 5.0	6.3 / 6.3

Mandrel gauge

- › Tolerance of the mandrel circumference is +/- 1.2 mm
- › Even a small under-swing on circumference accelerates the wearing of the rim and leads to tyre rotation on the rim or bead chafing
- › Crossing on circumference can cause a tyre damage already when fitting the tyre on to the rim

Mandrel gauge for rim circumference measurement

Contour gauge

- › If the flange is worn out or bend it does not support the bead of the tyre and can cause bead chafing and ruin the tyre

Tubes and valves

Tubes

Tube markings

Tube markings go hand in hand with tyre markings with one exception: a tube may be suitable for use with one or more different tyre sizes. In such instances, the tube bears a so called combination size designation. Before installation, it is imperative to ensure the tube carries the same size designation as the tyre.

Examples of one tube fitting several tyre sizes

Tyre size	Valve	Tube marking (combination size)	Tube product code
18.00-25	TR 220A	18.00-25	T55872
20.5-25		20.5-25	
23.5-25		23.5-25

540/60R26.5		540/60R26.5	
480/65R28		480/65R28	
500/65R28		500/65R28	
600/55-26.5	TR 218A	600/55-26.5	T55098
700/50-26.5	TR 218A	700/50-26.5	T55099
710/45-26.5		710/45-26.5	

Tube mounting

With properly done mounting, the risk of premature tube failure can be virtually eliminated. A so called dual inflation and the use of talcum powder will help ensure that no air gets trapped between the tyre and the tube upon installation.

Use of improper or excessive lubricants can lead to rim slippage. This will cause the valve to tear off, which can cause damage to the entire tyre.

Size designation marking on tube

Examples of valve types

TR J650

Tubes and valves

Recommendations on tube replacement hours and inflation pressure check-ups

Replacement recommendation

Severe working conditions:

Replace with new tubes every 5 000 hours.

Less demanding conditions:

Replace with new tubes every 8 000 – 10 000 hours.

This guideline applies when recommended inflation pressures for the given application are used.

This guideline applies when inflation pressure check-ups are regular.

Recommendation on regular inflation pressure check-ups

- › To be part of the normal forestry machine service procedure
- › To be done every at least every 500 working hours

TR 218 A for TT use

TR 618 A for TL use

TR 218 A

Notice!

Use only Nokian tubes for optimal tube life.

Notice!

If pressure recommendations and regular inflation pressure check-ups are not applied, tube damages can occur prematurely, even before the minimum 5 000 hour replacement interval.

Ground contact pressure comparison

Ground pressure comparison between different tyre sizes

Both the tyre diameter and width have an important role in determining the size of tyre contact area. In practice the tyre diameter increase has greater effect on machine mobility than the width increase. Due to the variation in operating ground the absolute ground pressure values can be difficult to assess. However the information in this table is useful when comparing the relative performance of different tyres.

Contact area and ground pressure at different tyre loads. Soft soil.

Q: How to find a maximum speed for the application (highest speed with the chosen tyre)?

Tyre: 650/60 R 34 175 D

Load per tyre: 10 000 kg / 22 046 lb

Inflation pressure: 4,0 bar / 58 psi Use tyre maximum inflation pressure to gain the highest speed value

A: Maximum speed is 30 km/h / 20 mph

Size: 650/60R34 175 D

Constant		0.8 bar	12 psi	1.2 bar	17 psi	1.6 bar	23 psi	2.0 bar	29 psi	2.4 bar	35 psi	2.8 bar	41 psi	3.2 bar	46 psi	3.6 bar	53 psi	4.0 bar	58 psi
km/h	mph	kg	lbs	kg	lbs	kg	lbs	kg	lbs	kg	lbs	kg	lbs	kg	lbs	kg	lbs	kg	lbs
10	5	4 500	9 920	5 540	12 215	6 750	14 880	7 650	16 865	8 550	18 850	9 850	21 715	10 450	23 040	11 350	25 020	12 450	27 445

25	15	3 960	8 730	4 860	10 715	5 940	13 095	6 750	14 880	7 550	16 645	8 650	19 070	9 200	20 280	10 000	22 045	10 950	24 140
30	20	3 780	8 335	4 660	10 275	5 680	12 520	6 450	14 220	7 200	15 875	8 250	18 190	8 800	19 400	9 550	21 055	10 450	23 040
40	25	3 400	7 495	4 200	9 260	5 100	11 245	5 780	12 745	6 500	14 330	7 450	16 425	7 900	17 415	8 600	18 960	9 400	20 725
50	30	3 040	6 700	3 740	8 245	4 540	10 010	5 160	11 375	5 760	12 700	6 600	14 550	7 050	15 540	7 650	16 865	8 350	18 410
65	40	2 500	5 510	3 075	6 780	3 750	8 265	4 250	9 370	4 750	10 470	5 450	12 015	5 800	12 785	6 300	13 890	6 900	15 210

Notice!
Exceeding maximum speed leads to tyre overheating resulting in premature break-up.

How to use load capacity tables?

Q: For the tyre, what are the required (minimum) inflation pressures when:

- 1) Driving on the road?
- 2) Working on the field?

Tyre: 710/55R34 177 D
Load per tyre: 7 000 kg / 15 432 lb

A:

- 1) Vehicle keeps maximum speed in 50 km/h / 30 mph.
 With this load the minimum inflation pressure is 2.8 bar/41 psi
- 2) Maximum speed in field applications is 10 km/h / 5 mph.
 With this load the minimum inflation pressure is 1.6 bar / 23 psi

Size: 710/55R34 177 D

Limited warranty

The below terms of this limited warranty apply to defects in the materials and workmanship of tyres (here in after “Tyres”) manufactured and/or sold by Nokian Tyres plc (hereinafter “Nokian”) with the exclusion of retreaded tyres. The limited warranty is valid for three (3) years from the date of purchase or five (5) years from the manufacture of a Tyre, whichever is the earliest. If the manufacturer discovers a defect in the materials or workmanship of a Tyre, it will be replaced on the following conditions.

Nokian’s limited warranty shall not apply, and Nokian shall not be held liable under it, if a defect to a Tyre is a result of the following:

- a) normal wear and tear
- b) misuse
- c) use in motor racing or other exceptional use
- d) faulty mounting on rim
- e) faulty storage by a party other than Nokian
- f) faulty studding after delivery
- g) alteration or repair by anyone other than Nokian or a third party approved by Nokian
- h) damage resulting from accident or negligence of anyone other than Nokian
- i) faulty or incomplete product advice or instructions given to the customer not confirmed or approved by Nokian
- j) damage from accessories, like tracks and chains.

Inferior quality – indicated by the “DA” brand put on a Tyre during quality grading – which reduces the selling price to the customer, will not be adjusted for external cosmetic reasons.

What was stated above concerning Nokian’s limited warranty applies only in cases where the tread depth of a Tyre meets the requirements of the vehicular laws of the country where the Tyre was sold. Should a Tyre’s tread depth be less than the country-specific requirements, Nokian’s limited warranty is not valid and Nokian cannot be held liable under it, even if the abovementioned time periods have not expired.

Nokian’s limited warranty is valid only if the customer notifies Nokian or its authorized dealer (a list of dealers must be available to customers) in writing of the alleged defect within 14 days of the date the customer discovers it, or reasonably should have discovered it. The customer must return the allegedly defective Tyre to Nokian or its authorized dealer without delay.

Should Nokian find the Tyre defective and the limited warranty applies to it, or Nokian is liable on other grounds, Nokian’s liability shall be limited to the delivery of a new Tyre to the customer. In that case the customer shall pay Nokian the difference between the price of a new Tyre and the unrealized benefit from the use of the returned Tyre (realizable had the returned Tyre not been defective). The unrealized benefit from use is calculated on the basis of the Tyre’s remaining tread depth.

Nokian’s liability shall extend to mounting/dismounting and other costs only to the extent mandated by the consumer protection laws of the country where the Tyre has been sold. Nokian’s liability shall also extend to studding, provided that the studding of the returned Tyre complies with the laws and regulations of the country where it was sold. In case the studding

has been done by a third party, Nokian is liable only if that party is approved by Nokian and has done the studding in a manner approved by Nokian and according to Nokian’s instructions. Studts are not covered by this limited warranty for Tyres.

In case of an integrated product, the warranties given by the producers of component products shall apply to defects in the materials and workmanship of their component products. Nokian shall not be liable for any failure to perform any of its obligations under this warranty due to problems beyond its reasonable control (force majeure events or effects). Such events or effects include: war, rioting, fire, industrial action, governmental acts, natural catastrophes, discontinuation of public or private transportation and energy and raw material shortages. In case of any of the mentioned events or effects, Nokian is unconditionally exempt from liability under the conditions set herein until the force majeure event or effect terminates. Nokian’s liability shall be limited to the above and only to the extent mentioned herein. Under no circumstances shall Nokian be liable for indirect, incidental or consequential damages, loss of business income or other revenues, other economic losses, or damages due to not being able to use a Tyre – whatever kind they may be.

Truck and bus tyres

Nokian truck and bus tyres are designed for demanding professional use in varying conditions with the aim of ensuring safe driving in all weather and road conditions. In our own test centres in Ivalo, Lapland, and in Nokia we test extreme driving situations in all seasons. Further development of the tyres involves millions of kilometres of driving in different environments and in all kinds of weather conditions.

Nokian Hakkapeliitta Truck F

A reliable winter steer axle tyre for medium and long-haul usage

Efficient grip, absolute durability and economical driving for extreme conditions. Robust shoulders ensure a precise and stable driving response.

Outstanding lateral grip in snowy and icy conditions by dense Spiral-Siping system and open pattern.

Applications

Where maximum grip is needed for safety. Winter time in hilly conditions and on secondary roads.

Can also be used in trailer when extra grip is needed.

* The above inflation pressures are minimum values. On front axle use it is recommended to use the table values increased with 1.0 bar, but not exceed 9.0 bar pressures.

Nokian Hakka Truck 861 / 861 WS

M+S

Reliable weatherproof steer axle tyre for use in medium and long haul applications

Tyre offers good grip on main road use because of Spiral-Siping system. Tread pattern is designed also for low rolling resistance and noise level.

Tread design and compound provide good mileage with even wear pattern.

Applications

Main road usage in trucks and coaches where good mileage from tyres is needed

Tyre can also be used in trailers.

Nokian Hakka Truck 844 / 844 WS

M+S

Reliable weatherproof steer axle tyre for use in medium and long haul applications

Tyre offers good grip on main road use because of Spiral-Siping system. Tread pattern is designed also for low rolling resistance and noise level.

Tread design and compound provide good mileage with even wear pattern.

Applications

Main road usage in trucks and coaches where good mileage from tyres is needed

Tyre can also be used in trailers.

Nokian Hakkapeliitta Truck D

First class winter drive tyre for medium and long haul usage in changing conditions

Tyre features dense 3D-siping Twin-Block pattern design to achieve superior traction especially on packed snow and icy roads.

Tread design and compound ensure that traction properties remain even when tyre is worn.

Applications

Where traction is needed for safe operation but high mileage tyre is needed.

Nokian Hakka Truck Drive

M+S

Weatherproof drive axle tyre offering reliable traction and mileage as well as comfort

Open V-shaped tread pattern offers good self cleaning properties while semi-open shoulders provide stability. Efficient siping design ensure good grip in braking and acceleration for the whole life of the tyre.

The tread pattern and compound has been optimized for good mileage and comfort.

Applications

Long haul operations where conditions can change suddenly. Tyre for all year round use in trucks and coaches.

Nokian Hakkapeliitta Truck F

A reliable trailer tyre for medium and long-haul usage

Efficient grip, absolute durability and economical driving for extreme conditions. Robust shoulders ensure a precise and stable driving response.

Outstanding lateral grip in snowy and icy conditions by dense Spiral-Siping system and open pattern.

Applications

Where maximum grip is needed for safety. Winter time in hilly conditions and on secondary roads.

Sizes

More information on the sizes is available on [page 346](#).

A reliable trailer tyre for medium and long-haul usage

Efficient grip, absolute durability and economical driving for extreme conditions. Robust shoulders ensure a precise and stable driving response.

Outstanding lateral grip in snowy and icy conditions by dense Spiral-Siping system and open pattern.

Applications

Where maximum grip is needed for safety. Winter time in hilly conditions and on secondary roads.

Sizes

More information on the sizes is available on [page 358](#).

› Nokian NTR-827 265/70R19.5 – T675000

“3PMSF”, tyre is accepted for severe snow conditions according to ECE 117.02 snow test. These tyres have also M+S marking.

M+S Tyre is for snow conditions according to ECE 117.02 definition.

Nokian Hakka Truck 861 WS

M+S

Reliable weatherproof trailer tyre for use in medium and long haul applications

Tyre offers good grip on main road use because of Spiral-Siping system. Tread pattern is designed also for low rolling resistance and noise level.

Tread design and compound provide good mileage with even wear pattern.

Applications

Main road usage on trailers where a good mileage is needed.

Sizes

More information on the sizes is available on [page 348](#).

Nokian NTR 32

Reliable steer axle tyre for all-year round use in urban delivery trucks and city buses

Wide zigzag-shaped grooves on tread pattern offer stability and ensures good handling properties while the wear pattern is even for a long service life. The tyre noise is pleasantly low.

A special compound is used for all-year use. Tyre has reinforced sidewalls to protect from curb abrasion.

Applications

Delivery trucks and buses in urban environment.

Nokian NTR 46

Steer axle tyre for trucks operating in rough and tough conditions

Open tread pattern and wide grooves ensure good self-cleaning and grip in changing driving conditions. Stone ejectors in the main grooves prolong operating life especially on rough surfaces.

High quality rubber compound and low heat build-up means that tyre wears evenly and retains its good properties throughout its lifetime.

Applications

On/off road trucks operating in tough and demanding conditions.

Nokian NTR 52

Steer axle tyre for trucks and coaches – All-year round tyre for comfort and safety

A new tyre construction and tread pattern ensure reliable operation and improved endurance. Heavily zigzag shaped grooves reduce stone trapping and improve driving stability.

The new tread compound and even wear shape increase the tyre mileage. Tyre meets the Euro 6 load carrying capacity.

Applications

Medium and long distance operations on main roads. Suitable for both, trucks and coaches.

Nokian NTR 74S

A sturdy tyre for demanding all-year round conditions in medium and long distance transport

Four zigzag shaped groove tread pattern and sturdy shoulders improve the durability and stability while reducing stone trapping and improve driving comfort.

Tyre offers even wear shape for long service life and low rolling resistance for economy.

Applications

Medium and long distance transports.

Tyre can be used in steer axle and trailer.

* The above inflation pressures are minimum values. On front axle use it is recommended to use the table values increased with 1.0 bar, but not exceed 9.0 bar pressures.

Nokian NTR 68

Drive axle tyre for trucks operating in rough and tough conditions

Open tread pattern ensure good self-cleaning and grip in changing driving conditions. Large blocks on tread offer durability and reduce chipping and tearing in challenging environments.

Special rubber compound and low heat build-up means that tyre wears evenly and retains its good properties throughout its lifetime.

Applications

On/off road trucks operating in tough and demanding conditions.

Nokian NTR 32

Reliable trailer tyre for all-year round use

Wide zigzag-shaped grooves on tread pattern offer stability and ensures good handling properties while the wear pattern is even for a long service life. The tyre noise is pleasantly low.

A special compound is used for all-year use. Tyre has reinforced sidewalls to protect from curb abrasion.

Applications

Medium and long distance trailers operating in paved roads.

Sizes

More information on the sizes is available on [page 368](#).

› [Nokian NTR 32 275/70R22.5 - T675123](#)

M+S Tyre is for snow conditions according to ECE 117.02 definition.

Nokian NTR 72 – 17.5"

A durable trailer tyre for all-year round use in paved roads

Sturdy four-rib tread pattern guarantees good lateral stability and even wear pattern for a long service life.

A special compound is used for all-year use. Tyre has also stone ejectors in main grooves to prevent stone trapping.

Applications

Low loading trailers and moving platforms operating in paved roads.

Sizes

More information on the sizes is available on **page 387**.

M+S Tyre is for snow conditions according to ECE 117.02 definition.

Nokian NTR 72

An economical trailer tyre for all-year round use in paved roads

A wide zigzag grooves on tread pattern ensure good grip and lateral stability. Tread design also offers low rolling resistance and tyre noise.

A special compound is used for all-year use. Even wear gives tyre a long service life making it economical for the transport operator.

Applications

Medium and long distance trailers operating in paved roads.

Sizes

Nokian NTR 74S

A sturdy tyre for demanding all-year round conditions in medium and long distance transport

Four zigzag shaped groove tread pattern and sturdy shoulders improve the durability and stability while reducing stone trapping and improve driving comfort.

Tyre offers even wear shape for long service life and low rolling resistance for economy.

Applications

Medium and long distance transports.

Tyre can be used in steer axle and trailer.
